DETAILED ACTION

This communication is in response to applicant's amendment filed November 13,
 Claims 1-24 are pending in this case. Claims 1, 16, 19, and 22 have been amended.

Continued Examination Under 37 CFR 1.114

2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on November 13, 2006 has been entered.

Election/Restrictions

- 3. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - Claims 1-18 and 22-24, drawn to a method for migrating from a source user authenticator to a target user authenticator having a target data store, classified in class 705, subclass 50.
 - II. Claims 19-21, drawn to a method for checking to a populated password data to a target data store of a target user authenticator, classified in class 707, subclass 1.
- 4. The inventions are distinct, each from the other because of the following reasons:

Application/Control Number: 10/075,336

Art Unit: 3621

5. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the invention I may be put into practice without using the checking function of invention II. The subcombination has separate utility such as a checking function to check for data in a data store or database.

Page 3

- 6. The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.
- 7. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

8. In the event of electing group I, the applicant is advised that said group[I is further subject to an election of species.

- 9. Claims 1, 16, and 22 are generic to the following disclosed patentably distinct species:
- IA. Claims 2-9, 17-18, and 23-24 drawn to a method for migrating from a source user authenticator to a target user authenticator having a target data store, wherein the target data store includes a password associated with the identification.
- IB. Claims 10 and 12, drawn to a method for migrating from a source user authenticator to a target user authenticator having a target data store, wherein the target data store is and LDAP complaint directory service.
- IC. Claims 11 and 13, drawn to a method for migrating from a source user authenticator to a target user authenticator having a target data store, wherein the target data store is a relational database.
- ID. Claim 14, drawn to a method for migrating from a source user authenticator to a target user authenticator having a target data store, wherein the user is a person.
- IE. Claim 15, drawn to a method for migrating from a source user authenticator to a target user authenticator having a target data store, wherein the user is a software object.
- 10. The species are independent or distinct because each may be implemented separately from the others. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed. Applicant is advised that a

reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

- 11. Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

 MPEP § 809.02(a).
- 12. A telephone call was made to applicant's attorney on January 17, 2007 to request an oral election to the above restriction requirement, but did not result in an election being made due to the attorney being temporarily out of the office.
- 13. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.
- 14. The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
- 15. Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of

Application/Control Number: 10/075,336

Art Unit: 3621

record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Page 6

- 16. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
- 17. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cristina Owen Sherr whose telephone number is 571-272-6711. The examiner can normally be reached on 8:30-5:00 Monday through Friday.
- 18. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew J. Fischer can be reached on 571-272-6779. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
